

Inventory Policy

Purpose

This document explains how inventory is managed in the warehouse.

Reorder Policy

When the inventory level of a product falls below **100 units**, the warehouse system automatically creates a reorder request.

Safety Stock

Each product should maintain at least **50 units** as safety stock.

Inventory Audit

A physical inventory audit is performed every month to verify stock accuracy.

Warehouse Manager Responsibilities

- Monitor inventory levels daily.
- Approve reorder requests.
- Report damaged products immediately.

Emergency Reordering

If a product is urgently required, a manual reorder request can be approved by the warehouse manager.
